DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species: The species of figure 1 (heating-cooling bath) and the species of figure 2 (electrical heating). The species are independent or distinct because they are not disclosed as being usable together and are therefore mutually exclusive.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 4 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Art Unit: 3746

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 to 7 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with

Application/Control Number: 10/798,015

Art Unit: 3746

which it is most nearly connected, to make and/or use the invention. On page 4, lines 13 and 14 state that "the liquid flows into or out of the end-openings 1a and 1b by the difference of the pressure". Yet, lines 21 and 22 state that "the end-openings 1a and 1b are sealed with the plugs 2 and 2." How can fluid flow through the end-openings if they are sealed with plugs? The plugs would appear to render the device as inoperative to pump fluid. This contradiction would impose an undue burden on one of ordinary skill in the art to make and use the invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 to 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Because the claims are based on a non-enabling disclosure, the scope thereof cannot be clearly ascertained.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1, as understood, is rejected under 35 U.S.C. 102(b) as being anticipated by Ciesielski (US 3,087,438). Ciesielski discloses a liquid pump having a pressure vessel 11 having a heating element 17 for pumping fluid by the difference in a coefficient of thermal expansion of the pressure vessel and the liquid.

Application/Control Number: 10/798,015

Art Unit: 3746

Claims 1 and 3, as understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Miller et al (US 4,917,575). Miller et al disclose a liquid pump having a pressure vessel 14 having a voltage applied thereto for pumping fluid by the difference in a coefficient of thermal expansion of the pressure vessel and the liquid.

Claims 1, 2 and 7, as understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Doub (US 4,281,969). Doub discloses a liquid pump having a pressure vessel 112 which is immersed in a heating-cooling bath for pumping fluid by the difference in a coefficient of thermal expansion of the pressure vessel and the liquid.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4, as understood, is rejected under 35 U.S.C. 103(a) as being unpatentable over Ciesielski. The specific inner diameter and length of the tube 11 are dimensions which are deemed to be obtainable through routine optimization experimentation. These dimensions are furthermore not deemed critical in view of their open ended ranges. (MPEP 2144.05 II A).

Claims 5, as understood, is rejected under 35 U.S.C. 103(a) as being unpatentable over Doub. The specific inner diameter and length of the tube 112 are dimensions which are deemed to be obtainable through routine optimization experimentation. These dimensions are furthermore not deemed critical in view of their open ended ranges. (MPEP 2144.05 II A).

Art Unit: 3746

Claim 6, as understood, is rejected under 35 U.S.C. 103(a) as being unpatentable over Miller et al. The specific inner diameter and length of the tube 14 are dimensions which are deemed to be obtainable through routine optimization experimentation. These dimensions are furthermore not deemed critical in view of their open ended ranges. (MPEP 2144.05 II A).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry relating to patent applications in general should be directed to the Patent Assistance Center at 1-800-786-9199.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Koczo, Jr. whose telephone number is 571-272-4830. The examiner can normally be reached on M-Th; 7:00-3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anthony D. Stashick can be reached at 571-272-4561. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
